

PRESS RELEASE

New Product Release: Rack Mounted Block Converters with Full User Interface and Remote Control

Peak Communications makes full front panel user interface standard on its high performance frequency block converters

PLAINSBORO, NJ, August 3, 2007 – A.G. Franz Associates, LLC announces new high performance frequency block converters from Peak Communications Ltd.

To complete the range of High Performance, Rack Mounted, Single & Multi-Band Block Up & Down Converters, Peak Communications have released three new product series that incorporate a full front panel User Interface and Remote Control as standard.

This advancement was made as a direct result of customer requests and brings the benefits of usability (local front panel and remote control) and ergonomic design. In addition, the inclusion of a microprocessor with full user interface allows the cost effective inclusion of electronically variable attenuators and supports low cost external redundancy switching systems, as the redundancy control is now built in.

The built-in redundancy control means that only a switching unit is required externally, thus a 1:1 system becomes only 2RU high and the cost of the external switching box is much lower than the previous RCU series.

The original versions of the IBU/IBD products (without the full user interface and remote control) are still available, as they suit customers looking for a simple system on a smaller budget.

The IBU'H', IBD'H'A & IBD'H'B series datasheets can be viewed on the company website www.peakcom.co.uk in the 'products' section.

About Peak Communications Ltd.:

Peak Communications is a rapidly expanding privately owned company based in Yorkshire, England, which has been providing frequency conversion products for the satellite and telecommunications markets since 1995. Peak's customer base includes most major broadcasters and telecommunications providers, and defense agencies around the world.
