New Product Release: Multi-Band Test Loop Translators

Peak Communications makes full front panel user interface standard on its test loop translators

PLAINSBORO, NJ, August 21, 2007 – A.G. Franz Associates, LLC announces new multi-band test loop translators from Peak Communications Ltd.

As a direct response to customer demands, Peak have released a range of Multi-Band Test Loop Translators. These units allow cost effective frequency translation, typically used to monitor the output of a transmit path either in the laboratory or on-site.

The units incorporate a full user interface and remote control and can be fitted with a range of electronically variable attenuator options.

The TLTHB series datasheet can be viewed on the company website www.peakcom.co.uk in the 'products' section.

About Peak Communications Ltd.:

Peak Communications is a rapidly expanding privately owned company based in Yorkshire, England, which has been providing frequency conversion products for the satellite and telecommunications markets since 1995. Peak's customer base includes most major broadcasters and telecommunications providers, and defense agencies around the world.
